Car AC Condenser

Category: Automobile

Aluminum car AC condenser with a dense fin-and-tube core and an integrated receiver-drier fused to one side tank.

DESCRIPTION

This car AC condenser is a flat aluminum unit with a dense parallel fin-and-tube core for heat rejection and side tanks at each end. Threaded refrigerant fittings with mounting tabs sit on the right-hand tank, and a cylindrical receiver-drier is fused directly to the left-hand tank, building filtration into the condenser itself. Corner mounting brackets position it in front of the vehicle's radiator.
