Motorcycle Brake/Clutch Master Cylinder

Category: Motorcycle

Master cylinder with white see-through reservoir, dust boot, and a long clevis-fork pushrod.

DESCRIPTION

This is a metal master cylinder body with a white translucent fluid reservoir and black filler cap, a rubber dust boot at the pushrod end, and a long pushrod terminating in a clevis fork for pedal or lever linkage. This clevis-fork design is consistent with a foot-pedal-actuated rear brake, or a hydraulic clutch, master cylinder.
