RTM rod-type immersion thermostat

`Model: RTM`

Brand: Thermowatt

Category: Heater

Thermowatt RTM rod-type immersion thermostat with a brass sensing rod and red rotary dial, for electric water heaters.

DESCRIPTION

This RTM thermostat from Thermowatt is a rod-type immersion thermostat used to control water temperature in electric water heaters, with a brass sensing rod fitted to a brown thermoplastic control head. The head carries a red rotary dial marked 'THERMOSTAT,' two brass screw terminals for the heating element wiring, and is embossed with the THERMOWATT brand name and a 'Made in Italy' marking. It mounts through the heater's flange alongside the heating element, with the rod extending into the tank to sense water temperature.
