Screw-type immersion heating element (paired set)

Brand: Thermowatt

Category: Heater

Thermowatt screw-type immersion heating element, sold as a paired set of two brass-flanged copper elements.

DESCRIPTION

This screw-type immersion heating element from Thermowatt is supplied as a paired set of two units, each with a brass hexagonal screw-in flange and a folded, twin-rod copper heating loop. The threaded brass flange screws directly into the tank or vessel wall, with the copper element extending inward to heat the surrounding water or liquid. Supplying two matched elements per set suits appliances that use dual heating elements.
