Washing Machine Motor Shaft Coupler

Category: Washing Machines

Cast metal motor shaft coupler with round base plate and two side clamp bolts for securing the shaft.

DESCRIPTION

This motor shaft coupler is a cast metal cylindrical sleeve mounted on a round base plate, with two side-mounted clamp bolts for securing a motor shaft inside the bore. The base plate provides a flat mounting face, and a cast seam line runs down one side of the coupler body. It is used to join or clamp a motor's output shaft to a driven component.
